IN THE CLAIMS:

This listing of claims replaces, without prejudice, all prior versions and listings of claims

in the application:

1. (Currently Amended) A dynamic irradiation process for the depolymerization of

heparin wherein the depolymerized heparin has a Mw less than or equal to 50% of the original

M<sub>w</sub> of said heparin prior to depolymerization, said dynamic irradiation process comprising

exposing said heparin in solution at a concentration between 2 and 25% w/v to UV radiation

having a peak of from 245 nm to 260 nm for a sufficient time to reduce the M<sub>w</sub> of the

depolymerized heparin by at least 50% as compared with the Mw of said heparin prior to said

exposure to UV radiation.

2. (Currently Amended) The dynamic irradiation process according to claim 1, wherein

the source of UV radiation is a medium or low pressure Hg lamp.

3. (Currently Amended) The dynamic irradiation process according to claim 1, wherein

the UV radiation has a prevalent emission band at 253 nm.

4. (Canceled)

5. (Canceled)

6. (Currently Amended) The dynamic irradiation process according to any one of claims

1, 2, or 3, wherein the depolymerization process is carried out at a temperature of between 0 and

70 °C.

7. (Canceled)

Customer No.: 27160

- 8. (New) The dynamic irradiation process according to any one of claims 1, 2, or 3, wherein the depolymerization process is carried out at a temperature of between 10 and 60 °C.
- 9. (New) The dynamic irradiation process according to any one of claims 1, 2, or 3, wherein the solution has a concentration between 4 and 15% w/v.

Customer No.: 27160
